e-PROCUREMENT

Programme Overview

e-Procurement (Electronic Procurement) is the Business to Business purchase and sale of goods and services through the internet as well as other electronic networks. e-Procurement has been found to offer benefits in the form of bringing down the procurement time, superior price discovery due to larger participation and also reduced cost of procurement.

The proposed programme draws upon the successful current practices in Electronic Procurement and presents an integrated perspective to implement and use it successfully. The programme draws upon case studies of successful implementations. Simulation of e-tendering, reverse auctions and demo of e-tendering software is one of the highlights of this programme.

Impact

It is envisaged that the participants would gain a better understanding of the ingredients of successful e-Procurement implementation such as:

- ◆ Leveraging internet for procurement.
- ◆ Software tools and technologies for e-auctions.
- ◆ Information security in the internet age.
- ◆ Developing a roadmap for e-Procurement implementation.

Participant Profile

Senior and middle level managers from public sector undertakings and government departments, World Bank projects, private sector and manufacturing industries. Also suitable for managers in materials management, stores, purchase and IT functions.
