## BEST PRACTICES AND INNOVATIONS IN HEALTH CARE DELIVERY

### Programme Overview

Health care industry has experienced proliferation of innovations aimed at enhancing life expectancy, quality of life, diagnostic and treatment options, as well as the efficiency and cost effectiveness of the health system.

Health systems must work to remove variation in the practice of medicine, ensuring adherence to the best clinical practices, which requires alignment with physicians and other care providers while creating huge opportunity to reduce cost and improve quality.

Providing comprehensive coordinated care, requires high level of integration, standardization and information sharing which is a challenge for most health care organisations. As the industry evolves, health systems will be forced to evolve with it; innovators will flourish and laggards will suffer, and new business models will emerge.

The programme on Best Practices and Innovations in Health Care Delivery will focus on set of best practices and exploit them in constructing great ideas to make sure they meet the goals of improving access to high-quality, affordable care by improving care delivery utilizing impactful innovations and best practices.

### Impact

The three-day programme will expose participants to a myriad of challenges, opportunities, and solutions in successful management of health care services.

Handling dilemma in providing optimal health care using latest technology and practices at least cost by way of utilizing cutting edge research and innovation in healthcare delivery, including improvements in systems, processes, management, and applied information technology.

The programme contents include but are not limited to safe practices for better health care, leveraging best practices for health including information technology to improve care and reduce costs, innovations, incorporating best practices from other industries, medical malpractice, risk management and the like.

Programme will enable participants to build knowledge and skills to perform as effective professionals in hospital systems/health institutions, both in the public and private sector.
