**Dushyant Mahadik**

Dates : 31 Jul–4 August 2017

Fee : ₹ 54,000/-  
(US \$ 1840) +  
Applicable Service Tax

## PROJECT APPRAISAL AND FINANCING

### Programme Overview

A country known for its high savings rate and high investment rate, India invests about a third of GDP or Rs 30 trillion every year. For this capital formation, many large projects are undertaken through public and private spending.

In order to prevent non-productive investments, it is imperative that projects are carefully assessed by applying appropriate criteria. The quantitative and qualitative aspects of project selection determine the success or failure of an organisation.

Moreover, these investment projects are unique events being executed for the first time. Due to the scale and complexity, financing of projects involves multiple risks, which must be analysed and appraised with care. Projects such as infrastructure development, mineral exploration, product launch and technology selection, are associated with high level of uncertainty and call for newer techniques.

### Impact

The programme aims to provide hands on experience to the participants about project appraisal and risk analysis. In addition, the participants will be familiarized to emerging areas such as infrastructure development through private financing (PPPs), and cross-border financing. The programme is designed for improving the level of conviction from the officers making capital budgeting decisions.

### Participant Profile

The programme is designed to sharpen the skills of professionals working in the financing or project appraisal functions of commercial banks, large corporations and government. Senior executives from project organisations will also benefit from attending the programme.
